

Dripfarm Technology Solution

Company Profile

Your Technology Choice For Farming

Dripfarm Technology Solution

Dripfarm technology solution brings together all horticulturist and agriculturists with an intention of reaching out to all farmers with an interest in horticultural/agricultural investment. Dripfarm technology solutions is committed to advise, guide , equip and help you adopt precise farming practice.

Horticulture Investment

DFS horticulture integrates farmer's budget, knowledge and crops. We offer credible advice to our clients to enable them operate within reasonable budget through efficient farm management system and training. This is a service that gives our farmers confidence and guarantees profitability from the horticulture investments.

What we are

A team of horticulturist powering information to farmers with an aim of achieving sustainable horticultural production.

What we do

We Bridge the gap by ensuring farmers have access to production field extension services, modern and automated irrigation technology, greenhouse kits, agricultural supply in addition to services such as training and growing guides.

Our Core Values

Expertise

Horticulturist and agronomist bring the highest available technical skills and knowledge to find the best solutions in agricultural projects we under-take.

Excellence

DFS horticulture ensure farmers work with a budget suitable for available farming space within scope of their knowledge, and experience acquired give them room for growth through reduced risks and make farming a rewarding venture.

Edge

DFS horticulture stays on the cutting edge of innovation and technology in the agricultural production.

Greenhouse Technology

Our Service Packages

Horticulture Consultancy

Dripfarm technology solutions leads our clients by guiding them through good agricultural practices that farming requires to achieve quality and quantity yield. Through our horticulture expertise we help our farmer to understand growing, timely nutrition and crop protection against pest and diseases for successful greenhouse technology, postharvest handling technology and automated irrigation technology.

Our commitment is to ensure appropriate horticulture practise is understood by our farmers

DFS horticulture assist our clients by providing them with correct market and market information.

Cold chain consultancy

DFS horticulture expertise in cold chain analysis guarantees our clients quality product delivery. It involves analysis of temperatures, storage and transportation for most perishable products including flowers, fruits and vegetables with an objective of retaining quality and maintain them as fresh as possible.

- We monitor temperature through storage and under transport system, produce feedback reports and analysis for improvement
- We evaluate post-harvest handling process and ensure our client compliance with required standards
- We establish traceability process that solves any breaks in the cold chain analysis.

Water Technology

Storage

Our service involves advise and provision for water harvesting technology and storage and these include dam construction, installation of dam liners and dam cover materials and Construction of water tank stands/towers with adequate water pressure to irrigate your farm.

We also provide solutions in water pumping system, solar energy usage and water treatment system indicated below

Water Treatment Technology

Our services extend to water purification technology including UV purification, Water softeners , RO water system and septic biodigestors.

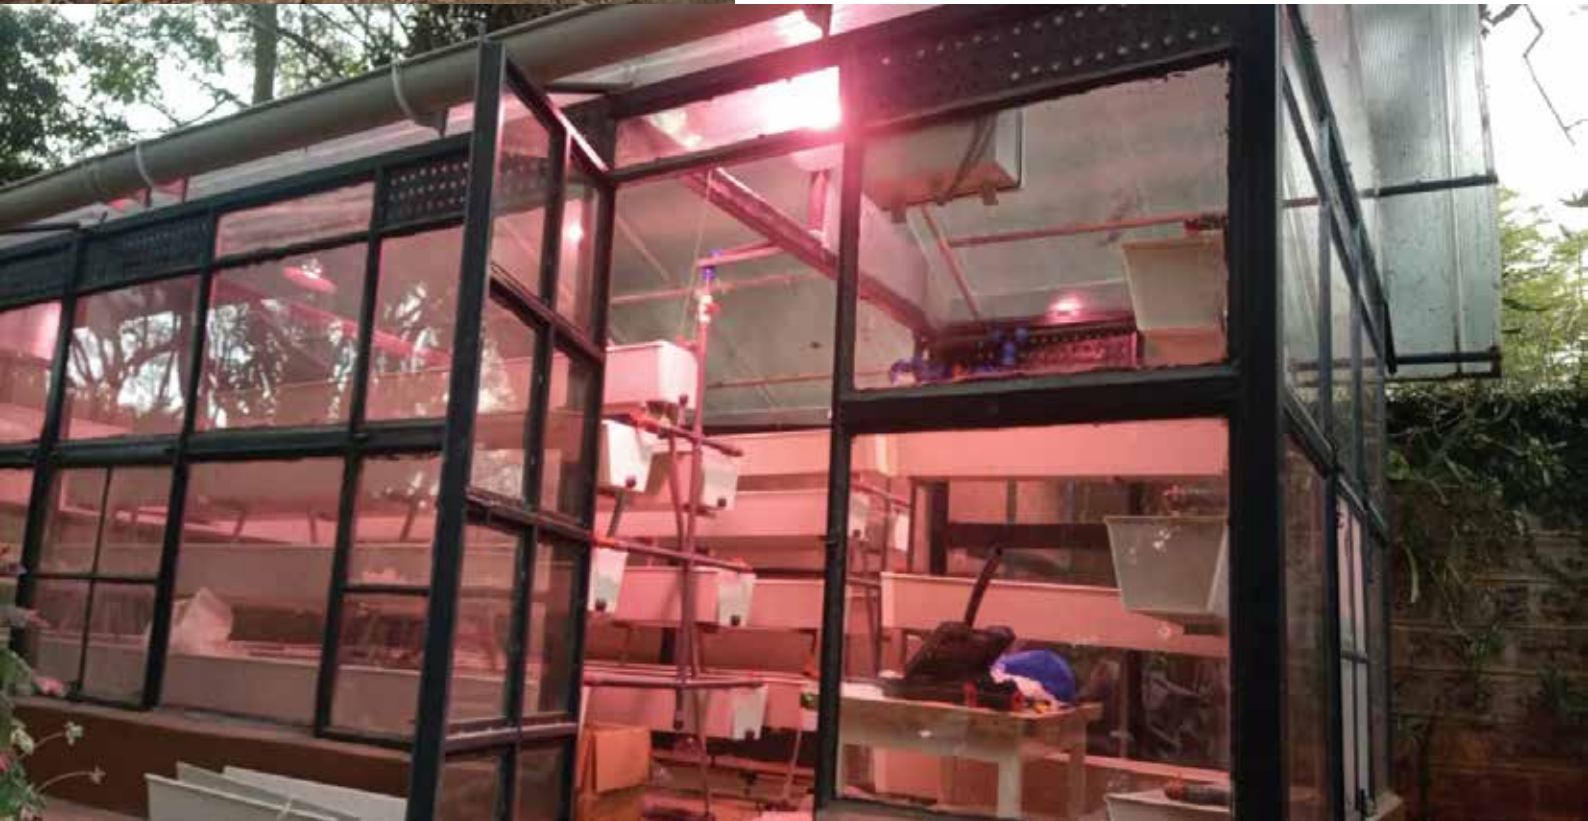

Waste Water Treatment System/Septic Biodigester

We venture to address water scarcity especially fields related to landscaping and growing demand for green solutions and thereby recycle waste water technologies for sewer water, kitchens and washing areas collected in a single unit, passed through treatment system and come out as clean water that can be reused. This project is part of accomplishment that ensure our landscaping projects are served with sufficient watering system. Clean water can be used in washroom, car wash and constructions.

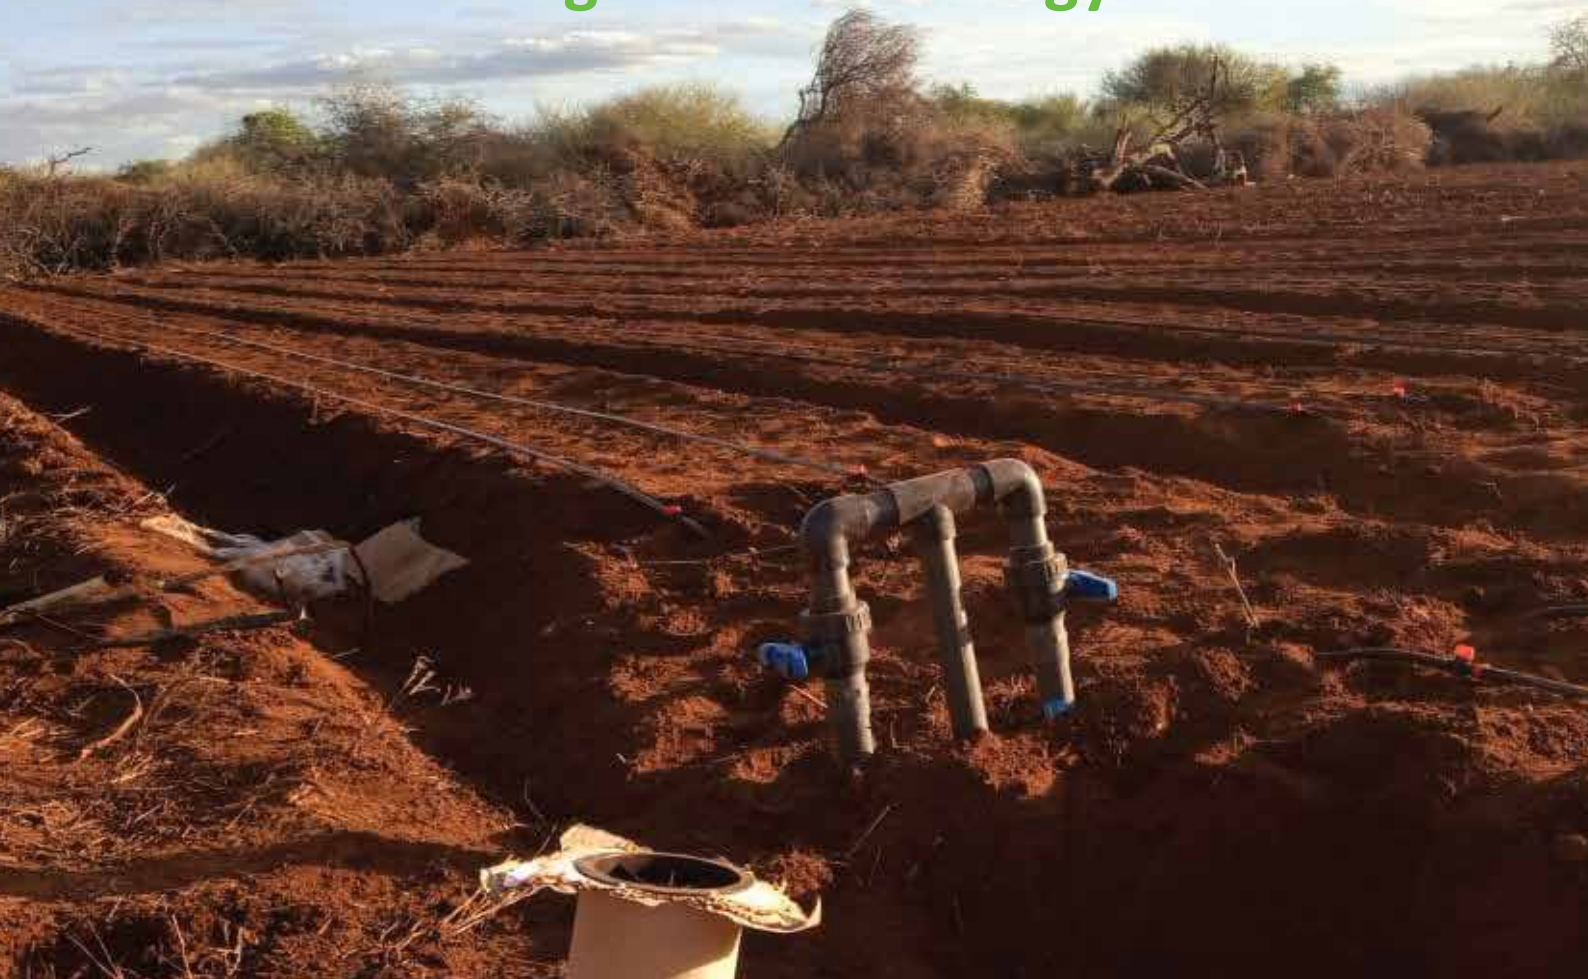

Other benefit would include maintaining hygiene combined with comfortable environment for our clients.

Horticulture Consultancy

Irrigation Technology

Why DFS horticulture?

DFS horticulture purpose to diversify in agriculture technology and horticulture consultancy and we connect professionals to farmers directly from their location. Our profession will engage and help farmers through filling information gap as agronomist,, irrigation advise, design and installation, greenhouse construction and production and shed net/insect nets use as well as water harvesting, usage and storage techniques. Other services will include postharvest handling, storage and market provision.
